

# 5 Best Reasons to Outsource Software Development

---

**T** [tech.co/5-best-reasons-outsource-software-development-2015-11](https://tech.co/5-best-reasons-outsource-software-development-2015-11)

When it comes to setting up your company's IT infrastructure, you need to give it a lot of thought. It is not as easy as it sounds. You may need to devote some resources specifically for the IT needs, which simply means using up the resources meant for your company's core business. In many cases, you will find your IT resources incapable of handling the highly skilled and evolving [software development](#) needs of your company. What will you do? Hire more resources? If you are not an IT setup, this could mean consuming a lot of a money and energy in working towards something that is certainly not your cup of tea. Here are 5 reasons why you should not go for in-house software development, but [outsource your software development](#).

## Experienced People on Board

When you outsource your software development, you hand it over to people who are more experienced in this field. You will need to find resources or companies whose core is dev.. You just need to appoint a single point of contact in your company, who can overlook the activities of the company to whom you have outsourced. You have knowledgeable and experienced people who have got relevant skill sets on board. You can rely on them as they know the [modern software development strategies](#).

## Reduced Costs

When you outsource the aspect which is not core to your company, which in this case is software development, then you will reduce the overhead, infrastructure, and resource cost. When you outsource, you gain more efficiency and productivity, which simply translates to getting work done at lower cost along with higher productivity.

## Freedom from Tools and Licenses

Software development requires a lot of tools and licenses, which you simply cannot avoid. With the ever evolving technologies, you will see that tools and licenses have an increasing demand. Again, you need to keep in mind when the licenses will expire, and what new tools you will need, in case you let the development occur in-house. [Outsourcing has its benefits](#). The outsourced company will take care of the tools and licenses, and you don't need to worry about something that you don't understand.

## Focus on Core Products

Once the resources are freed from the IT work, they can concentrate on the core products and services offered by your company. These resources will work towards developing the core, and making it stronger. When you concentrate on the core, you can easily develop new technologies, and offer diverse products and services to your end users. This could further your company in many ways.

## Makes You More Productive

By outsourcing software development, you save a lot of time and money on the whole process. The reason being: your outsourced company will have more experienced and quality resources. They will be able to give you a better output, as against the in-house development. It is ideal for those who don't have a high budget. The decision remains with you, whether you want to outsource software development, or you want to keep it in-house.
